Estimate by dividing the hundred into 250 and 225.

Estimate 10s (330, 340) between 325 and 350.

Estimate  $167 - 89$

Use near numbers  $170 - 90 = 80$

Near numbers:

## Check Answers

$347 - 74 = 273$  can be checked using

$273 + 74 = 347$

This part whole shows the inverse calculations using these three numbers.

Key Vocabulary

Measure and Compare Mass

mass

Scales can be used to measure grams.

Scales can be used to measure kilograms.

gram

A gram is a unit of measurement that is used to measure the mass of something.

A kilogram is a unit of measurement that is greater than a gram. It is also used to measure the mass of something.

kilogram

Grams can be written as **g**.

Kilograms can be written as **kg**.

capacity

$1000g = 1kg$

To compare mass, we can use the words 'heavier' and 'lighter'.

volume

Measure and Compare Capacity

millilitre

**Capacity** is the amount of liquid a container can hold.

**Volume** is how much liquid is in the container.

Measuring jugs can be used to measure larger volumes.

Greater volumes are measured in litres.

Litres can be written as **l**.

litre

Measuring cylinders can be used to measure smaller volumes.

$1000ml = 1l$

lighter

Smaller volumes are measured in millilitres.

To compare capacities, we can use the word 'full'.

heavier

Millilitres can be written as **ml**.

## Reading Scales

### Mass

Each of the melons has a mass of 6kg but the arrows are all pointing at different points on the scales. This is because each of the measuring scales have different increments marked on them.

Always look carefully at how the numbers on the scales increase when reading a measurement.

## Knowledge Organiser

### Capacity

Measuring containers all have different capacities.

Each of these containers contain the same volume of 100 millilitres but have different capacities and scales. Always look carefully at how the numbers on the scales increase when reading a measurement.

### Add and Subtract Mass

$$600\text{g} + 500\text{g} = 1100\text{g} = \mathbf{1\text{kg } 100\text{g}}$$

$$1\text{kg} - 300\text{g} = 1000\text{g} - 300\text{g} = \mathbf{700\text{g}}$$

### Add and Subtract Capacities

$$800\text{ml} + 400\text{ml} = 1200\text{ml} = \mathbf{1\text{l } 200\text{ml}}$$

$$1\text{l } 300\text{ml} - 200\text{ml} = \mathbf{1\text{l } 100\text{ml}}$$

interpret

Bars are used to show the data in each category. There must be a gap between each bar. Bar charts can have different scales.

vertical axis

The scale on this bar chart counts in twos.

horizontal axis

The scale on this bar chart counts in fives.

The scale on the bar chart depends on the range of the data.

Tables

In order to understand the data presented in a table, you must read the table's title and the headings. Remember to always look at the heading above each piece of information.

heading

Ticket Type	Weekday Price	Weekend Price
Adult	£6	£7.50
Child	£4	£4.50
Student	£5.50	£6

information

Using the table, we can see the cost of an adult and a child visiting the cinema on a Monday would be £10.

Pictograms

Pictograms use pictures or symbols to represent data. The key shows what each symbol represents. This pictogram uses 1 symbol to represent 2 pets.

Class A's Pets

To represent 1 pet, a picture of half a square is used.

Traffic Survey

Using the key, we can see that 16 people travel by bus.
