Estimate and Approximate

Rounding to Estimate

Round to ten:

Rounding is not as accurate when both numbers are rounded up. A better estimate comes from "rounding" one down and one up.

Estimating on a Number Line

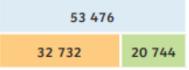

The arrow is about $\frac{3}{4}$ of the way across the line so it is 40 000.

Inverse Operations

Use the inverse to check:

To check 53 476 – 32 732 = 20 744 20 744 use 32 732 + 20 744 = 53 476

Start with a number, subtract 409 and double. I end with 6264. To find the starting number use the inverse: halve, then add 409. Half of 6264 = 3132. 3132 + 409 = 3541. The starting number was 3541.

Multistep Problems

Using a Bar Model

The sum of two numbers is 25 567.

The difference is 1875.

Subtract 1875 from 25 567 = 23 692.

Halve 23 692 to find smaller number = 11 846.

Add 1875 to find larger number = 13 721.

	£20		
£3.75	£8.49	?	
£	£12.24		

£20 is used to buy 2 books costing £3.75 and £8.49.

How much change is given?

$$£3.75 + £8.49 = £12.24$$

$$£20.00 - £12.24 = £7.76$$

Adding and Subtracting Decimals

$$0.8 + 0.001 = 0.801$$

$$1.031 - 0.23 = 0.801$$

$$0.4005 + 0.4005 = 0.801$$

Rounding Decimals

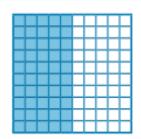

If the tenths digit is 1, 2, 3 or 4, we round down to the nearest whole number. If the tenths digit is 5, 6, 7, 8 or 9, we round up to the nearest whole number.

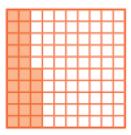

1.15 1.16 1.17 1.18 1.19 1.11 1.12 1.13 1.14

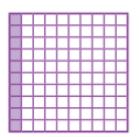

If the hundredths digit is 1, 2, 3 or 4, we round down to the nearest tenth.

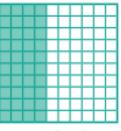

If the hundredths digit is 5, 6, 7, 8 or 9, we round up to the nearest tenth.

Percentage and Decimal Equivalents

$$50\% = \frac{50}{100} = \frac{1}{2} = 0.5$$

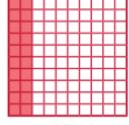

$$50\% = \frac{50}{100} = \frac{1}{2} = 0.5$$
 $25\% = \frac{25}{100} = \frac{1}{4} = 0.25$ $10\% = \frac{10}{100} = \frac{1}{10} = 0.1$ $40\% = \frac{40}{100} = \frac{2}{5} = 0.4$

$$10\% = \frac{10}{100} = \frac{1}{10} = 0.1$$

$$40\% = \frac{40}{100} = \frac{2}{5} = 0.4$$

Crossing the Whole

$$0.82 + 0.63 = 1.45$$

$$20\% = \frac{20}{100} = \frac{1}{5} = 0.2$$
 $1\% = \frac{1}{100} = 0.01$ $70\% = \frac{70}{100} = \frac{7}{10} = 0.7$

$$1\% = \frac{1}{100} = 0.01$$

$$70\% = \frac{70}{100} = \frac{7}{10} = 0.7$$

multiple	Divide the numerator by the denominator. This shows you the whole number and the fraction.	the denominator to make an improper fraction. $2\frac{5}{6} = \frac{12}{6} + \frac{5}{6} = \frac{17}{6}$ And the fractions together.		
common denominator	Adding and Subtracting Fractions			
common numerator	To add or subtract fractions with denominators that are multiples of the same number, we must change one fraction to have the same denominator.			
	$\frac{1}{3} + \frac{1}{3} = \frac{2}{3}$	$\frac{1}{4} + \frac{3}{8} = \frac{2}{8} + \frac{3}{8} = \frac{5}{8}$ $\frac{5}{6} - \frac{2}{3} = \frac{5}{6} - \frac{4}{6} = \frac{1}{6}$		

Fractions

Knowledge Organiser

Add Fractions Where the Total is Greater Than 1

Subtract from a Mixed Number

$$\frac{1}{2} + \frac{3}{4} + \frac{5}{8} = \frac{4}{8} + \frac{6}{8} + \frac{5}{8} = \frac{15}{8} = 1\frac{7}{8}$$

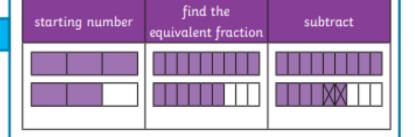

$1\frac{2}{3} - \frac{2}{9} = 1\frac{6}{9} - \frac{2}{9} = 1\frac{4}{9}$

Add Mixed Numbers

$$1\frac{1}{4} + \frac{3}{8} = 1\frac{2}{8} + \frac{3}{8} = 1 + \frac{5}{8} = 1\frac{5}{8}$$
$$1\frac{1}{4} + \frac{3}{8} = \frac{5}{4} + \frac{3}{8} = \frac{10}{8} + \frac{3}{8} = \frac{13}{8} = 1\frac{5}{8}$$

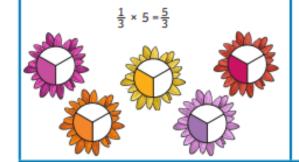

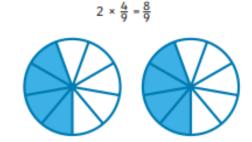

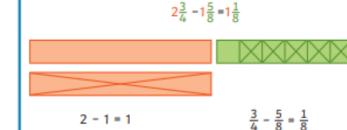

Multiply Unit Fractions by an Integer

Multiply Non-Unit Fractions by an Integer

Subtract Two Mixed Numbers

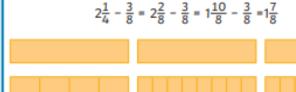

Multiply Mixed Numbers by Integers

Subtract from a Mixed Number - Breaking the Whole

Convert to an improper fraction and multiply the numerator by the integer.

$$2\frac{1}{4} \times 2$$
 = $\frac{9}{4} \times 2$ = $\frac{18}{4}$ = $4\frac{2}{4}$ = $4\frac{1}{2}$

Use repeated addition.

$$2\frac{1}{4} \times 2 = 2\frac{1}{4} + 2\frac{1}{4} = 4\frac{2}{4} = 4\frac{1}{2}$$

Perimeter and Area	ı	Knowledge Organiser
Key Vocabulary	Measure Perimeter	Calculate Perimeter
metre	Measure the perimeter of a rectangle:	Calculate the missing sides of this rectilinear shape to find the perimeter:
kilometre	w	2cm
perimeter	Measure the length (l) and width (w). Perimeter = l + w + l + w or (l + w) × 2	8cm 7cm
length	Measure the perimeter of regular shapes: Measure the length (l) and	missing side 1
width	count the number of sides (s) on the shape.	* This shape is not drawn to the dimensions specified.
rectangle	Measure the perimeter of irregular shapes:	Missing side 1 + 4cm = 8cm, so missing side 1 = 4cm.
rectilinear		Missing side 2 = 2cm + 7cm = 9cm
dimensions		Perimeter = sum of all sides = 2cm + 4cm + 7cm + 4cm + 9cm + 8cm = 34cm
	Measure the length of each side and add them together.	

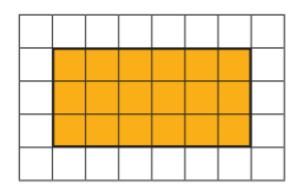

Length and Perimeter

Knowledge Organiser

Area of Rectangles

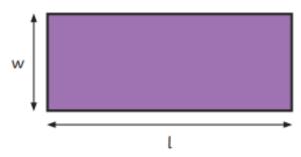

Area of Irregular Shapes

The area of a rectangle on a grid:

Multiply the length \times width $= 6 \times 3 = 18$ squares.

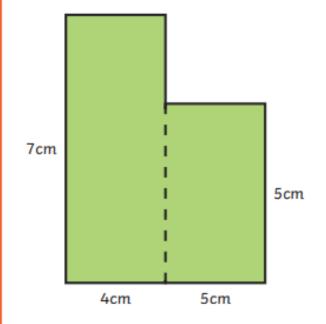

The area of a rectangle = length (l) \times width (w).

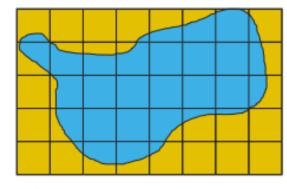

To find the area of a compound shape, divide the shape into rectangles with known dimensions:

Area of Compound Shapes

Area = 7cm × 4cm + 5cm × 5cm = 28cm² + 25cm² = 53cm² To find the area of an irregular shape, find the number of whole squares and part squares.

Whole squares = 10 Part squares = 22

Estimate of area = whole squares + half part squares

 $= 10cm^2 + 11cm^2 = 21cm^2$

*There are other ways to estimate the area of irregular shapes.

Regular and Irregular Polygons

Regular	Irregular		
	→ ▲ ⊴		

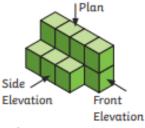

A polygon is any two-dimensional shape formed with straight lines.

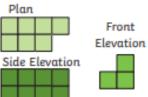

In a regular polygon, all the sides and angles are equal.

In an irregular polygon, the sides and angles are not equal.

Representations

Cube models can be drawn as 2D representations using different elevations.

A shape net is a 2D drawing of an unfolded 3D shape. When you are drawing or reasoning about shape nets, think carefully about where the edges of the faces meet.

Shape net of a tetrahedron.

Properties of 3D Shapes

N	Surfaces		Edges		Marekia ara	D
Name	Flat	Curved	Flat	Curved	Vertices	Picture
sphere	0	1	0	0	0	
cube	6	0	12	0	8	
cuboid	6	0	12	0	8	
cone	1	1	0	1	0	
cylinder	2	1	0	2	0	
square-based pyramid	5	0	8	0	5	A
tetrahedron	4	0	6	0	4

pentagonal prism	7	0	15	0	10	
hexagonal prism	8	0	18	0	12	0
octagonal prism	10	0	24	0	16	
octahedron	8	0	12	0	6	♦

A cone has an apex. This is because a vertex is the point where two straight edges meet and a cone has no straight edges.

Properties of Shape

Knowledge Organiser

Identifying Angles

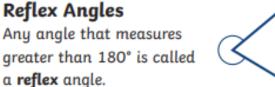

Acute Angles

Any angle that measures less than 90° is called an acute angle.

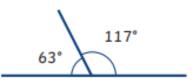

Obtuse Angles

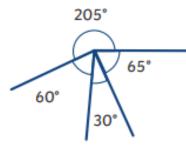

Any angle that measures greater than 90° and less than 180° is called an obtuse angle.

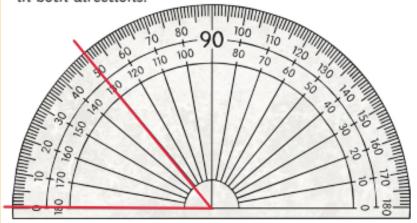

Angles on a straight line always total 180°.

Angles around a point always total 360°.

Measuring and Drawing Angles

To measure angles, we use a protractor. Look carefully at how the numbers on the scale count from 0° to 180° in both directions.

Multiples of 90° can be used as descriptions of a turn.

 $\frac{1}{4}$ turn = 90°

 $\frac{1}{2}$ turn = 180°

 $\frac{3}{4}$ turn = 270°

1 turn = 360°

Using Properties of Rectangles

6cm + 2cm = 8cm

7cm + 6cm = 13cm

Position and Direction

Knowledge Organiser

Key Vocabulary

coordinate

quadrant

x-axis

y-axis

reflection

mirror line

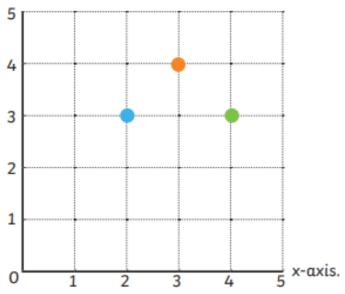

translation

horizontal

vertical

Coordinates are a useful way to locate a position on a map or grid.

The numbers across the horizontal line of the grid are on the x-axis.

The numbers on the vertical line of the grid are on the y-axis.

We always read or write the number on the x-axis before the y-axis.

The x and y position are written in brackets with a comma.

The coordinate of the orange spot is (3, 4).

To help you remember which point to read or write first, simply remember to move 'along the corridor and up the stairs'.

In other words, move on the x-axis and then move on the y-axis.

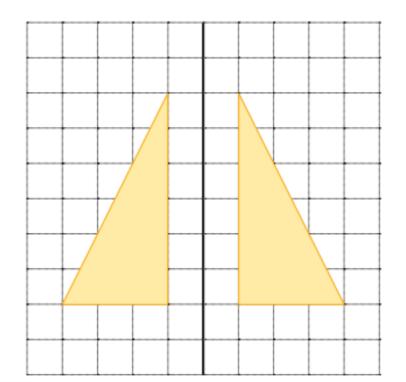

Position and Direction

Knowledge Organiser

Reflection

A shape is reflected when is flipped over a mirror line.

The reflected image is congruent to the original. This means that the measurements of the sides and angles have not changed. Each point of the reflected shape is the same distance from the mirror line as the original shape.

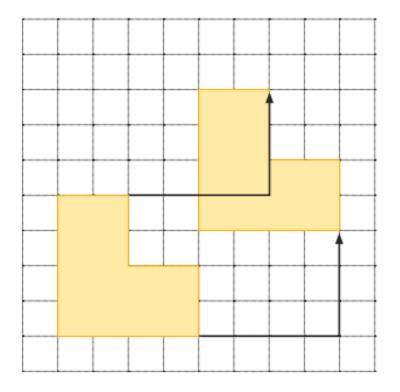

In maths, translation means moving an object on a grid. The

When translating an object on a grid, it can move up or down, left or right.

object is moved without changing the size, turning or reflecting it.

Translation

Volume	Knowledge Organiser			
Key Vocabulary	Volume of Cubes and Cuboids			
cubed	Volume is measured in cubed units. For example, cm³ , m³ and km³ .			
area	To calculate the volume of cubes and cuboids:			
cross-section	1. Calculate the area of the cross-section (one face). 2. Multiply the green of the cross-section (one face) by its depth.			
prism	2. Multiply the area of the cross-section (one face) by its depth.			
cube	Area of cross section (face) = 2cm × 2cm = 4cm²			
cuboid	4cm² × 2cm = Volume of 8cm³			
face				
length				
height	Area of cross section (face) = 4cm × 2cm = 8cm²			
width	8cm² × 3cm = Volume of 24cm³

Read and Interpret Line Graphs

Here is a line graph showing the average temperature for each month.

The y-axis shows temperature in intervals of 2°C on a scale of 0°C to 16°C.

The points show the average temperature for each month.

The x-axis shows the months of the year.

Use Line Graphs to Solve Problems

To find the average temperature in May, follow the arrow up from May and across to the temperature. As this is halfway between 10°C and 12°C, the average temperature in May is 11°C.

To find the difference between the average temperatures in August and in November, find the temperature for each month and calculate the difference between the two. The shape of the line graph can show how the temperature changed. he average temperature falls 9°C from August to November.

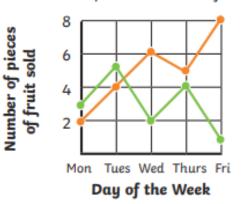

Draw Line Graphs

Here is a table showing the number of different types of fruit sold each day.

	Bananas	Apples
Mon	2	3
Tues	4	5
Wed	6	2
Thurs	5	4
Fri	8	1

This graph can be used to represent the data from the table.

Mark each point for the number of bananas sold each day and join each point with a line.

Mark each point for the number of apples sold each day and join each point with a line.
